ASSUMPTIONS AND METHODOLOGY: Firemen and Rescue Squad Workers' Pension Fund

The cost estimates of the System's Actuary are based on the employee data, actuarial assumptions and actuarial methods used to prepare the June 30, 2008 actuarial valuation of the fund. The data included 36,160 active members, 10,509 retired members in receipt of annual pensions totaling \$21.4 million, and actuarial value of assets equal to \$317 million. Significant actuarial assumptions used include (a) an investment return rate of 7.25%, (b) the 1974 George B. Buck Mortality Table for deaths after retirement and (c) rates of separation from active service based on Fund experience. The actuarial cost method used was the entry age method with open-end unfunded accrued liability and a frozen unfunded liquidation period of nine years. Detailed information concerning these assumptions and methods is shown in the actuary's report, which is available upon request from Stanley Moore.
